

# Spacecraft on a Chip Development

Completed Technology Project (2012 - 2014)

## Project Introduction

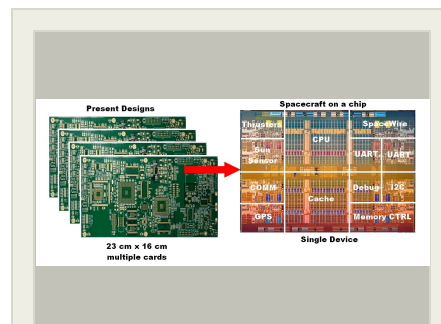

This project lays the groundwork for the future development of a spacecraft on a chip implementation (SCOC), which would combine the electronics for multiple spacecraft functions onto a single device, or as few devices as practical.

System on a chip is a method to increase engineering efficiency. State of the art components are increasing in gate count as expected according to Moore's law. In the past, a single engineer could write all of the code that would be placed into a smaller programmable component. As component density has increased, it now typically takes several engineers to develop a single chip. In the near future, design modularity and design reuse will be required to maintain engineering efficiency. System on a chip allows NASA to develop or buy a library of functions which can be stitched together using a common interconnect bus. This promotes code reuse and greatly increases the speed at which a large, complex design can be developed. The direct benefits are efficiency and remaining competitive. This design methodology paves the way for the final goal of developing a complete spacecraft on a chip. The goal of this project is to lay the key groundwork for being able to build a complete spacecraft on a chip.

## Anticipated Benefits

N/A

## Primary U.S. Work Locations and Key Partners

Spacecraft on a Chip Development

## Organizational Responsibility

## Responsible Mission Directorate:

Mission Support Directorate (MSD)

## Lead Center / Facility:

Goddard Space Flight Center (GSFC)

## Responsible Program:

Center Independent Research &amp; Development: GSFC IRAD

## Project Management

## Program Manager:

Peter M Hughes

## Project Manager:

Wesley A Powell

## Principal Investigator:

Michael Lin

## Technology Maturity (TRL)

Start: 2  
 Current: 3  
 Estimated End: 3

# Spacecraft on a Chip Development

Completed Technology Project (2012 - 2014)

## Technology Areas

### Primary:

- TX02 Flight Computing and Avionics
  - └ TX02.2 Avionics Systems and Subsystems
    - └ TX02.2.1 Spacecraft Command and Data Handling Systems (C&DH)
